

1

ABSTRACT

2        The present invention provides an assembly, or kit, of  
3    injection molded panels having integrated connectors which  
4    combine to form a drawer cabinet. The panels are formed of  
5    injection molded plastic to interlock with one another  
6    without the need for separate fasteners or connectors. The  
7    interior of the cabinet is constructed and arranged to accept  
8    a plurality of cooperating drawer guides and drawers which  
9    snap into place to fill the cabinet's interior.
